

Cinis' first shipload sold to end customers

Last week, Cinis' first shipload of environmentally friendly potassium sulphate left Köpmanholmen for delivery to the customer Van Iperen International. Now, Van Iperen International has announced that the entire volume has been sold to end customers across the world, in all continents.

On September 18, 2024, the first shipment of mineral fertilizer from Cinis Fertilizer's production facility left the port of Köpmanholmen for delivery to customer Van Iperen International in the Netherlands. The volume amounted to just over 3,400 tonnes. Van Iperen International has announced that the entire volume, and both grades, have been resold to growers in all continents for delivery in October.

"We are pleased to have confirmation that the demand for our products is great and that they will make a difference to growers around the world already this autumn," says Jakob Liedberg, CEO of Cinis Fertilizer.

"The vessel has now arrived in the Netherlands, and we can confirm that we have resold the products at expected price levels. We will deliver to around 25 countries during October," says Erik van den Bergh, CEO of Van Iperen International.

"We continue ramping up production and our deliveries with the plan to reach full capacity this year to meet the high demand for our mineral fertilizer," concludes Jakob Liedberg.

About Cinis Fertilizer

Cinis Fertilizer is a Swedish green-tech company producing an environmentally friendly mineral fertilizer, potassium sulphate (SOP), by, among other things, recycling waste streams from the manufacture of batteries and battery materials, as well as from the pulp industry and other industries. The patent protected technology will use half as much energy as today's production methods and the result is a fertilizer with low carbon footprint, a unique and circular contribution enabling sustainable agriculture. FNCA Sweden AB is Certified Adviser. For further information please visit: www.cinis-fertilizer.com.
